AAU Students Among Top 22 Teams in International Universities Challenge 2026

The College of Engineering at Al Ain University proudly celebrates the achievement of its student team, which secured a place among the top 22 teams out of approximately 200 participating teams representing universities from around the world in the 5th Edition of the Universities Challenge 2026.

Organized by United Arab Emirates University (UAEU) in collaboration with the Sharjah Government Communication Award, the three-day competition took place at Al Majaz Amphitheatre in Sharjah.

Representing Al Ain University, the team presented AMAN 360, an AI-powered emergency communication and response platform designed to transform official government hazard and emergency information into clear, personalized safety instructions for affected communities.

The platform uses verified government data, GIS information, and road-closure updates to

identify affected individuals and determine appropriate safety actions. Through AI-powered communication, AMAN 360 delivers accessible instructions in both Arabic and English, allowing citizens to confirm their safety, request assistance, and communicate with authorities in real time.

The project was developed by Bilal Feroz Khan, Mohammad Umar, and Awaiz Ahmed.

Under the supervision and coordination of Eng. Zaid Hadya, the students demonstrated creativity, teamwork, and technical innovation while competing alongside teams from national and international universities.

Ranking the top 22 among approximately 200 teams is a significant accomplishment that highlights the students' potential and their ability to develop innovative ideas to address real-world challenges.

The College of Engineering congratulates the participating students on this achievement and commends their efforts in representing Al Ain University on an international platform. This accomplishment reflects the University's commitment to fostering innovation, practical learning, and meaningful student engagement in international competitions.
